Amendments to the Claims:

1-2. (Canceled)

3. (Currently Amended) A mobile communication device for use by a mobile user, comprising:

an input device configured to receive from an operator a selection signal indicative of a topic of interest; and

means for sending present position information of the mobile communication device and the selection signal over a bi-directional wireless link; and

means for receiving position-related information that is a function of the present position information and the selection signal.

4. (Previously Added) The mobile communication device of claim 3, wherein the topic of interest is selected from a plurality of topics of interest.

5-7. (Canceled)

- 8. (Previously Added) The mobile communication device of claim 3, wherein said input device comprises a keypad and the selection signal corresponds to an alphanumeric entry on said keypad.
- 9. (Previously Amended) The mobile communication device of claim 8, further comprising a dual tone multi-frequency (DTMF) generator responsive to the alphanumeric entry to supply a DTMF selection signal to the means for sending.
 - 10. (Previously Amended) The mobile communication device of claim 3, further comprising

a microphone having an output coupled to the means for sending, for transmitting audio signals over the bi-directional wireless link.

- 11. (Previously Added) The mobile communication device of claim 10, wherein said input device comprises aid microphone and the selection signal comprises a voice signal received by said microphone.
- 12. (Previously Amended) The mobile communication device of claim 10, further comprising a microphone isolation circuit configured to disconnect an output of said microphone from the means for sending during reception of the position-related information.
- 13. (Previously Added) The mobile communication device of claim 3, further comprising a speaker configured to emanate audible signals comprising a menu of selectable topics of interest.
- 14. (Previously Added) The mobile communication device of claim 13, further comprising a speaker isolation circuit configured to prevent audio signals corresponding to the position information from emanating from said speaker.
 - 15. (Canceled)
- 16. (Previously Added) The mobile communication device of claim 3, wherein said mobile communication device is an analog wireless telephone.
- 17. (Previously Added) The mobile communication device of claim 3, wherein said mobile communication device is a digital wireless telephone.

- 18. (Previously Added) The mobile communication device of claim 3, wherein said mobile communication device is a laptop computer.
- 19. (Previously Added) The mobile communication device of claim 3, wherein said mobile communication device receives position-related information which includes audio signals.
- 20. (Previously Added) The mobile communication device of claim 3, wherein said mobile communication device receives position-related information which includes text signals.
- 21. (Previously Added) The mobile communication device of claim 3, wherein said mobile communication device receives position-related information which includes image signals.
- 22. (Previously Added) The mobile communication device of claim 3, wherein said mobile communication device receives position-related information which includes video signals.
- 23. (Previously Amended) The mobile communication device of claim 3, wherein said mobile communication device is configured to send over the bi-directional wireless link an emergency response request destined for an emergency response system.
 - 24-47. (Canceled)

Cont.

- 48. (Previously Added) A mobile communication device for selectively reporting position information, comprising:
 - a receiver configured to receive position signals;
- a processor coupled to said receiver and responsive to the position signals to determine position information indicative of a present position of the mobile communication device;

a modulator demodulator configured to transmit the position information to a destination over a communication network; and

a position reporting enabling unit configured to selectively enable and disable transmission of the position information while said mobile communication device is operational.

- 49. (Previously Added) The mobile communication device of claim 48, wherein said position reporting enabling unit comprises an enable/disable switch on the mobile communication device.
- 50. (Previously Added) The mobile communication device of claim 48, wherein said processor periodically determines the position information in accordance with a refresh interval.
- 51. (Previously Added) The mobile communication device of claim 48, wherein said position reporting enabling unit overrides the refresh interval when transmission of the position information is disabled.
- 52. (Previously Added) The mobile communication device of claim 48, wherein said receiver is a global positioning system (GPS) receiver.
- 53. (Previously Added) The mobile communication device of claim 48, wherein the position reporting enabling unit selectively enables and disables transmission of the position information based on input from a mobile user of the mobile communication device.
- 54. (Previously Added) The mobile communication device of claim 48, further comprising a user interface that permits a mobile user of the mobile communication device to communicate over a communication network, wherein said modulator/demodulator transmits communication signals

() d

received from the user interface and supplies received communication signals to the user interface.

55. (Previously Added) The mobile communication device of claim 3, further comprising: a receiver configured to receive position signals;

a processor coupled to the receiver and responsive to the position signals to determine the present position information indicative of a present position of the mobile communication device.

- 56. (Previously Addled) The mobile communication device of claim 55, wherein the receiver is a global positioning system (GPS) receiver.
- 57. (Previously Added) The mobile communication device of claim 55, wherein the present position information comprises position coordinates.
- 58. (Previously Added) The mobile communication device of claim 55, wherein the processor periodically determines the position information from position signals received by the receiver, and the means for sending periodically transmits the position information over the bidirectional wireless link.
- 59. (Previously Added) The mobile communication device of claim 58, wherein the processor periodically updates the position information in accordance with a refresh interval.
- 60. (Previously Added) The mobile communication device of claim 3, further comprising: a receiver configured to receive position signals, wherein the present position information comprises the position signals.
 - 61. (Previously Added) The mobile communication device of claim 3, further comprising:

output means for providing the position-related information to the mobile user.

- 62. (Previously Added) The mobile communication device of claim 3, further comprising: a position reporting enabling unit configured to selectively enable and disable transmission of the position information while said mobile communication device is operational.
- 63. (Previously Added) The mobile communication device of claim 3, wherein the input device receives a plurality of selection signals, and the means for sending sends the plurality of selection signals over the bi-directional wireless link.
- 64. (Previously Added) The mobile communication device of claim 3, wherein the mobile communication device is a portable computing device.
 - 65. (Currently Amended) A method of receiving position-related information via a mobile communication device, comprising:
 - (a) supplying a selection signal indicative of a topic of interest to the mobile communication device:
 - (b) sending present position information of the mobile communication device and the selection signal over a bi-directional wireless link from the mobile communication device; and
 - (c) receiving over the bi-directional wireless link position-related information that is a function of the present position information and the selection signal.
 - 66. (Previously Added) The method of claim 65, further comprising:
 - (d) receiving position signals; and
 - (e) processing the position signals to determine the present position information indicative of a present position of the mobile communication device.

Cont

- 67. (Previously Added) The method of claim 65, further comprising: receiving at the mobile communication device position signals, wherein the present position information comprises the position signals.
- 68. (Previously Added) A mobile communication device for use by a mobile user, comprising:

an input device configured to receive from an operator a selection signal indicative of a topic of interest;

means for sending the selection signal over a bi-directional wireless link;

means for receiving position-related information that is a function of a present position of the mobile communication device and the selection signal; and

output means for providing the position-related information to the mobile user.

- 69. (Previously Added) A method of receiving position-related information via a mobile communication device, comprising:
- (a) supplying a selection signal indicative of a topic of interest to the mobile communication device:
- (b) sending the selection signal over a bi-directional wireless link from the mobile communication device; and
- (c) receiving over the bi-directional wireless link position-related information that is a function of a present position of the mobile communication device and the selection signal.
- 70. (Currently Amended) A mobile communication device for use by a mobile user, comprising:

means for establishing a bi-directional wireless link;

means for sending present position information of the mobile communication device over a bi-directional wireless link;

means for receiving position-related information that is a function of the present position information and at least one user-selected topic of interest; and

output means for providing the position-related information to mobile user

- 71. (Previously Added) The mobile communication device of claim 70, further comprising: a position reporting enabling unit configured to selectively enable and disable transmission of the position information while said mobile communication device is operational.
 - 72. (Previously Added) The mobile communication device of claim 70, further comprising: a receiver configured to receive position signals;

a processor coupled to the receiver and responsive to the position signals to determine the present position information indicative of a present position of the mobile communication device.

- 73. (Previously Added) The mobile communication device of claim 72, wherein the receiver is a global positioning system (GPS) receiver.
- 74. (Previously Added) The mobile communication device of claim 72, wherein the present position information comprises position coordinates.
- 75. (Previously Added) The mobile communication device of claim 70, further comprising: a receiver configured to receive position signals, wherein the present position information comprises the position signals.
 - 76. (Previously Added) The mobile communication device of claim 70, further comprising

an input device configured to receive from an operator a selection signal indicative of the user-selected topic of interest, wherein the means for sending sends the selection signal over the bi-directional wireless link, and the position-related information is a function of the selection signal.

- 77. (Previously Added) The mobile communication device of claim 76, wherein the user-selected topic of interest is selected from a plurality of topics of interest.
- 78. (Previously Added) The mobile communication device of claim 70, wherein said mobile communication device is an analog wireless telephone.
- 79. (Previously Added) The mobile communication device of claim 70, wherein said mobile communication device is a digital wireless telephone.
- 80. (Previously Added) The mobile communication device of claim 70, wherein said mobile communication device is a laptop computer.
- 81. (Previously Added) The mobile communication device of claim 70, wherein said mobile communication device is a portable computing device.
- 82. (Previously Added) The mobile communication device of claim 70, wherein said mobile communication device receives position-related information which includes audio signals.
- 83. (Previously Added) The mobile communication device of claim 70, wherein said mobile communication device receives position-related information which includes text signals.
 - 84. (Previously Added) The mobile communication device of claim 70, wherein said mobile

communication device receives position-related information which includes image signals.

85. (Previously Added) The mobile communication device of claim 70, wherein said mobile communication device receives position-related information which includes video signals.

86. (Previously Added) The mobile communication device of claim 70, wherein said mobile communication device is configured to send over the bi-directional wireless communications link an emergency response request destined for an emergency response system.
